Activity Objective

Students will research oyster farming and learn how its role in aquaculture exemplifies nature's efficiency and adaptability. In addition, students will make connections about the importance of oysters to the food and aquaculture industry. They will explore the crucial roles oysters play in marine ecosystems, particularly in water filtration, habitat creation, and sustainable food production. Students will have the opportunity to present their thinking about innovation, sustainability, and oyster farming, and will develop their vocabulary and conceptual understanding.

This resource has been created and designed to complement the SFIRP resource [Farmer Time | Experts In The Field - Oyster Farming](#) video. The activity has been delivered for teachers as a 20 minutes end of plenary, enjoy!

ACTIVITY 1 | Page 2 of 2

Farmer Time | Experts In The Field - Oyster Farming

View Farmer Time | Experts In The Field - Oyster Farming (7.18mins) and complete the following questions.

9. What are farmers looking for when grading oysters?

10. Explain why grading is important to the oyster farming industry?

11. How does the flow of the water help the oysters?

12. How does flooding affect your leases?

13. Beside poor water quality after flooding what other causes have affected oyster leases?

Your thoughts: What are the advantages of hatcheries in farming oysters?
